

## NTHNL Industrial Kit

This is a soundpack I made from a variety of analog synthesizers. Sounds came from the Moog MOTM, Model12 and Minimoog, the Makenoise 0-coast and ST0, the Tiptop Z3000, BD-909, and Z8000 as well as a wide variety of others. I created many of these sounds for their complex and abrasive qualities and you'll find plenty of surreal electronic textures and patterns here. You'll also find plenty of conventional drum sounds and noise sweeps as well as more unique drum sounds.

As usual if you like what you hear and want to use it, please follow my accounts @nthnl.sound on Instagram and Facebook, and NTHNL on spotify and soundcloud. Feel free to reach out and send me what ever you make with these sounds.
